### **LEED PRODUCT INFORMATION (recycled product content in rolled steel products)**

**Dear Valuable Partner,**

ARTROM STEEL TUBES S.A. a company headquartered in Romania, Draganesti Street, no.30, Slatina, Olt County, hereby declares that all its seamless pipes made for industrial, mechanical engineering and automotive applications are manufactures from billets produced at its own facility (Plant 2, Steel Production, Resita).

The billets are manufactured exclusively using an electric arc furnace, which is fed with 100% recycled material. Steel has excellent circular economic characteristics, being highly reusable and adaptable material.

In our facilities approximately 90% of the scrap used comes from Romania and about 10% from other European countries. All scrap, ferroalloy and other materials used in the production process of ARTROM are a non- Russian origin.

Incoming scrap types in our facilities are treated before entering the production process to remove any unsuitable material and to ensure compliance with scrap standard (European Steel Scrap Specification). The quality of each scrap batch delivered is controlled at our scrap yard including check for radioactivity.

Magdalena Popescu  
Director of Quality, Environmental & Integrated Management System
